

# Chrome Shelving Unit

ASSEMBLY INSTRUCTIONS

06/2014

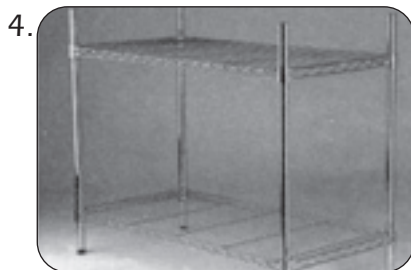

Screw the height adjusting foot to each of the lower posts in a clockwise direction.

Snap the plastic sleeves into the post grooves. Sleeves must be snapped together with the small tapered side facing up.

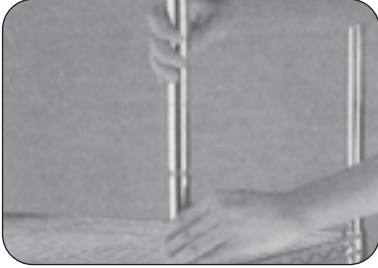

Make sure each shelf is the correct way up. Hold the shelf on its side and slide the top of the four posts through the bottom of the shelf at its corners until there is a snug fit. After the four posts have been slid through each hole, set the shelf upright.

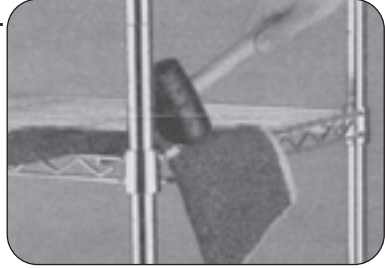

Snap the plastic sleeves at your next desired shelf height. Slide the shelf down from the top of the posts onto the sleeves.

5.

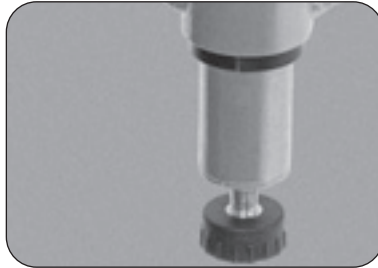

Screw the upper post into the lower post using the connectors which should already be screwed into one of the post halves. Then repeat step 5 for the remaining shelves. It is recommended that the top shelf is lined up in the upper post groove.

6.

Push down on all corners of each shelf with a rubber-faced mallet to secure the shelf in place over the sleeves.

7.

Adjust each of the height adjustable feet to make sure the unit is level and sturdy.

**Additional Comments:**

- Ensure shelving is not overloaded by its maximum capacity per shelf (evenly distributed).
- Clean with warm soapy water and dry with a soft cloth.
- Avoid scratching surface.
